About us

Product Introduction

Contact us

Part 1 *About us*

MVI EcoPack was founded in 2010, is a tableware specialist, with offices and factories in mainland China.

We are dedicated to offering our customers good quality and innovations at affordable prices. Our products are made from annually renewable resources like corn starch, sugarcane pulp, and wheat straw fiber, some of which are by-products of the agriculture industry.

We use these materials to make sustainable alternatives to plastics and Styrofoam. We constantly monitor trends and seek out new products suitable for all clients in countries worldwide.

□ PLA & CPLA

□ Water Barrier Coated Paper

□ Kraft Paper

□ Bamboo Paper

Bagasse Fiber

WHY WE LOVE BAGASSE?

Bagasse has a lower carbon footprint

Bagasse is made from sugarcane waste. During the growth of the sugarcane, atmospheric carbon is captured by the plant and converted to biomass.

Bagasse is recyclable with cardboard

Sugarcane packaging is suitable for recycling along with cardboard (as long as its clean and no food residue remains).

Sugarcane is a rapidly renewable and widely available resource

In 2017, about 1.8 billion tonnes of sugarcane was harvested worldwide. While 30% of the crop yields sugar products, accounting for 95% of the revenue, the other two-thirds left after harvest has little economic value and is largely treated as waste. Utilising bagasse for packaging further maximises the value of the crop and aligns with the principles of a circular economy. (source)

WHY SHOULD YOU SWITCH TO CORN STARCH PACKAGING?

Corn starch packaging can be very beneficial to the environment and your business.

- Firstly, by switching to corn starch PLA, you can improve your brand by positioning yourself as a socially responsible and eco-friendly company. As a result, you can expect an increase in overall marketability because you'll effectively be able to attract environmentally conscious customers. Likewise, you can achieve a greater relevance in your industry because you're successfully able to keep up with the latest packaging trends related to sustainability.
- Most importantly, given the fact that the Canadian government is actively trying to implement a nationwide ban on single-use plastics, there isn't much leeway for businesses to continue using conventional plastics as restrictions will continue to increase. From the end of 2022, Canada officially banned the company from importing or producing plastic bags and take-out boxes.

However, by switching early on, you can gain a competitive edge as your product and service offerings will stand out from your competitors who are still using conventional plastics!

Welcome to PLA CPLA & Kraft Paper Range

- ◆ **Polylactide(PLA) is a thermoplastic aliphatic polyester derived from renewable resources.**
- ◆ **There is 65% less energy be extracted by PLA than normal PE coating.**
- ◆ **PLA cup can be 100% biodegradable after 6 months and resolve into H2O CO2.**
- ◆ **CPLA is a crystallized PLA, which is created for higher heat use products.**
- ◆ **CPLA is compostable in industrial composting facilities, and generally, it takes 3 to 6 months for TPLA to compost, while 2 to 4 months for CPLA.**
- ◆ **CPLA cutlery and cup lids are widely used for the disposable takeaway food packaging, as it is perfect for use with either hot or cold foods, CPLA cutlery is strong enough to stand up to any dish.**
